

MONTANA TIMBER PRODUCTS

A New Era in Building Materials.
INSPIRED BY A LEGACY OF THE MAJESTIC WEST

NINE BASIC TINTED STAIN COLORS

A New Era In Eco-Friendly Building Materials

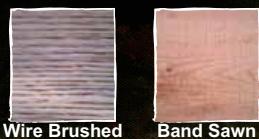

AquaFir™ is a premium substitute for architects, contractors and homeowners who have historically chosen to specify various species of cedar or pine; but want more durability and strength. AquaFir's Doug Fir substrate is Kiln Dried to a moisture content range of 10-19%. Available in lengths 6'-20', widths 1"x3"-2"x12" with Timber series and additional dimensions available on request. AquaFir is commonly used for wainscot, and exterior siding, trim, decking, fencing and timbers.

The product is pre-finished with two coats of our NO VOC Seal-Once sealer and combined with semi-transparent tint to color the product just the way you want. Our multiple color combinations increase the breadth of offerings and provide you with several choices to choose from.
